NOTE
YOUR TRACTOR IS
EQUIPPED WITH A SPECIAL
ALTERNATOR SYSTEM.
THE LIGHTS ARE NOT
CONNECTED TO THE
BATTERY, BUT HAVE THEIR
OWN ELECTRICAL SOURCE.
BECAUSE OF THIS, THE
BRIGHTNESS OF THE LIGHTS
WILL CHANGE WITH ENGINE
SPEED. AT IDLE THE LIGHTS
WILL DIM. AS THE ENGINE IS
SPEEDED UP, THE LIGHTS
WILL BECOME THEIR
BRIGHTEST.

Engine Power Rating Information

The gross power rating for individual gas engine models is labeled in accordance with SAE (Society of Automotive Engineers) code J1940 (Small Engine Power & Torque Rating Procedure), and rating performance has been obtained and corrected in accordance with SAE J1995 (Revision 2002-05). Torque values are derived at 3060 RPM; horsepower values are derived at 3600 RPM. Actual gross engine power will be lower and is affected by, among other things, ambient operating conditions and engine-to-engine variability. Given both the wide array of products on which engines are placed and the variety of environmental issues applicable to operating the equipment, the gas engine will not develop the rated gross power when used in a given piece of power equipment (actual "on-site" or net power). This difference is due to a variety of factors including, but not limited to, accessories (air cleaner, exhaust, charging, cooling, carburetor, fuel pump, etc.), application limitations, ambient operating conditions (temperature, humidity, altitude), and engine-to-engine variability. Due to manufacturing and capacity limitations, Briggs & Stratton may substitute an engine of higher rated power for this Series engine.

This exploded view diagram illustrates the assembly of a steering knuckle. The central component is the steering knuckle (2), which is shown with various mounting points and attachment areas. Key components and their assembly sequence are indicated by numbered callouts:

- Top Mounting:** The top of the knuckle (2) features a mounting plate (19) secured by bolts (63) and washers (57). A top plate (1) is shown above, with a bolt (26) and washer (33) passing through it into the knuckle. A nut (45) is used to secure the top plate.
- Steering Arm and Tie Rod:** The steering arm (16) is attached to the knuckle via a ball joint (27) and a nut (28). The tie rod (61) is connected to the steering arm through a tie rod end (64) and a nut (22). The tie rod is also connected to the lower control arm (62) via a tie rod end (64) and a nut (22).
- Lower Control Arm and Shock Absorber:** The lower control arm (62) is connected to the knuckle through a ball joint (67) and a nut (74). The shock absorber (5) is connected to the knuckle via a shock absorber mount (66) and a nut (74). The shock absorber is also connected to the lower control arm through a shock absorber mount (66) and a nut (74).
- Brake Components:** The brake disc (13) is mounted on the knuckle through a brake hub (14) and a nut (15). The brake caliper (70) is mounted on the brake disc via a caliper bracket (69) and a nut (68).
- Other Components:** Various other components are shown, including a steering knuckle pin (71), a steering knuckle pin (72), a steering knuckle pin (73), a steering knuckle pin (74), a steering knuckle pin (75), a steering knuckle pin (76), a steering knuckle pin (77), a steering knuckle pin (78), a steering knuckle pin (79), a steering knuckle pin (80), a steering knuckle pin (81), a steering knuckle pin (82), a steering knuckle pin (83), a steering knuckle pin (84), a steering knuckle pin (85), a steering knuckle pin (86), a steering knuckle pin (87), a steering knuckle pin (88), a steering knuckle pin (89), a steering knuckle pin (90), a steering knuckle pin (91), a steering knuckle pin (92), a steering knuckle pin (93), a steering knuckle pin (94), a steering knuckle pin (95), a steering knuckle pin (96), a steering knuckle pin (97), a steering knuckle pin (98), a steering knuckle pin (99), a steering knuckle pin (100).

The diagram uses dashed lines to show the relative positions and assembly paths of the components. A large 'GPL' watermark is visible in the background.
